

SignProtect™

Aleviate Risk and Control Your Signature Verification Process

Mitek's innovative SignProtect™ software provides the capability to encode, encrypt, decode and validate signatures with the objective of detecting forgeries in On-line or paper-based processes.

▶ Control Your Signature Verification Process

Mitek has capitalized on more than 150 man years of Research and Development in the area of Image Analytics to perfect signature authentication technology. Mitek's technologies are widely used in the Financial Services Industry. Now these specific Signature solutions have been adapted to help resolve the challenges of compliance and fraud for all industries.

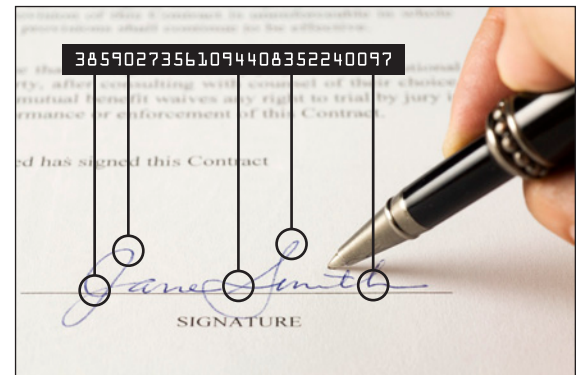

Signature Processing and Validation

▶ SignProtect™ goes far beyond the simple process of comparing a sample signature to an authentic one. The technology has been perfected to address the real world challenges of identifying fraudulent signature activity with confidence and minimal time and labor costs. The SignProtect™ software delivers advanced, and comprehensive functionality.

- ◆ Signature Finding
- ◆ Signature Extraction
- ◆ Encode, Encrypt and Decode
- ◆ One to One Signature authentication

▶ Summary of Capabilities

- ◆ Compares Sample signature against Authentic(s) and automatically detects forgeries
- ◆ Reviews signature archives for inconsistent signatures
- ◆ Create authentic 'code' from multiple signatures
- ◆ Operates in both Paper and PDA/Tablet PC capture workflows

Digital profile analysis of signature converted to digital code.

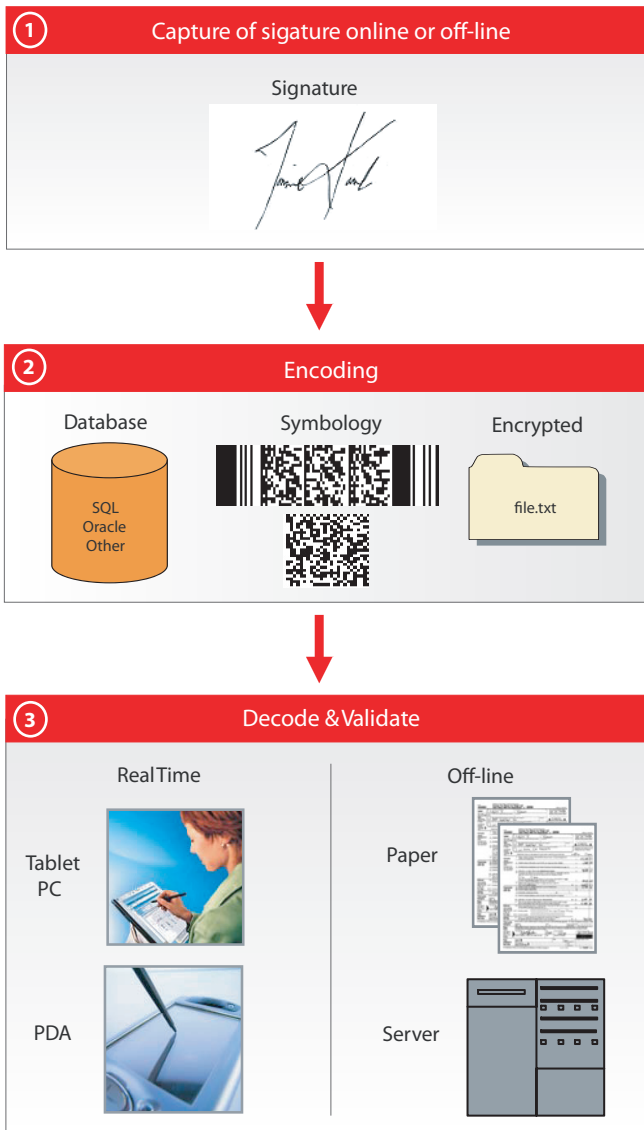

▶ Validate any Tablet PC, PDA or Paper Signature

- ◆ Appraisal and Loan Documents
- ◆ Medical releases
- ◆ Compliance Forms
- ◆ Delivery Certification
- ◆ Government Issued ID's

▶ Benefits of Automated Signature Validation

- ◆ Significantly reduces labor cost of manual or semi-automatic validation
- ◆ Helps meet compliance and security standards
- ◆ Minimal set-up and configuration time

➤ SignProtect™ Authentication and Code Creation Process

➤ Easy to Integrate

SignProtect™ is easy to configure and embed in your application. The technology can be deployed either as a remote device (PDA, and tablet) add-on, or in a back office processing environment. The toolkit is a low level API that supports rapid application development so the development efforts to integrate SignProtect™ are minimal. The solution can be totally seamless to your customer, and can be integrated into any Windows based application.

➤ Built on the World's Premier Technology

Mitek is a global provider of image analytics forgery detection solutions. For over a decade, Mitek has been a leading innovator of pattern based recognition technologies and has earned a worldwide reputation for advancing handwriting and machine print recognition and we have used this legacy of knowledge and expertise to develop our signature and forgery detection solutions. Major corporations worldwide have chosen Mitek expressly for our unmatched expertise, innovations and impressive performance record.

➤ About Mitek Systems

Mitek Systems, Inc. is a global leader in Image Analytics and pattern recognition technologies used by financial institutions, life science companies, government agencies and systems integrators.

Mitek Systems develops software diagnostic tools and the most comprehensive suite of intelligent character recognition software used to test, clean, read and authenticate imaged documents and objects. Mitek's software is used to process over 8 billion transactions per year.
